Downloads **PostgreSQL Downloads**

PostgreSQL is available for download as ready-to-use packages or installers for various platforms, as well as a source code archive if you want to build it yourself.

Packages and Installers

Select your operating system family:

**Source code**

The source code can be found in the main [file browser](#) or you can access the source control repository directly at git.postgresql.org. Instructions for building from source can be found in the [documentation](#).

Beta/RC Releases and development snapshots (unstable)

There are source code and binary [packages](#) of beta and release candidates, and of the current development code available for testing and evaluation of new features. Note that these builds should be used **for testing purposes only**, and not for production systems.

3rd party distributions**Machine Learning and Data Visualization with PostgreSQL**

[Download 2UDA](#) for Windows, macOS, and Linux - certified by 2ndQuadrant for all supported versions of PostgreSQL.

2ndQuadrant Unified Data Analytics (2UDA) is a data analytics application suite that unifies databases, machine learning, data mining, and visualization. The application can be installed using a user-friendly, one-click desktop installer. 2UDA builds on the capabilities of Orange, an open source machine learning and data visualization tool, by integrating it with the PostgreSQL database.

Ready to run stacks

'LAPP', 'MAPP' and 'WAPP' (Linux/Mac/Windows + Apache + PHP + PostgreSQL) stacks are available from [BitNami](#).

Additional Software**Software Catalogue**

There is much software available that is not bundled with PostgreSQL. The [Software Catalogue](#) offers a listing of many commercial and Open Source applications, interfaces and extensions to PostgreSQL that you may find useful.

If you wish to have your product listed in the catalogue, please [fill out this form](#).

File Browser

You can download most of the software we publish from a mirror site using our [File Browser](#).
